

## DESCRIPTION & ADVANTAGES

### IMAGING PAPERS POSTER PAPER OUTDOOR

---

#### TRISOLV PRIMEART PAPER 200

**glossy 3686** 200 g/m<sup>2</sup>

Multilayer coated, water-, and weather-resistant, bright white paper, specifically developed for solvent or UV-curing inks. TriSolv papers qualify for billboard application, delivering high scratch resistance and perfect folding performance.

The mark of  
responsible forestry

### Advantages

- Water-repellent surface
- Premium poster paper
- Photorealistic features
- High degree of stiffness
- Ink savings up to 30 %
- Best for eco-solvent ink

### GENERAL TIPS & STORAGE

- Please note when printing with any of the 300 series HP Latex printer, to print roll to roll!
- The ink amounts must be adjusted to the paper. Please reduce the single colours cyan, magenta, yellow and black (ink restrictions) and lower the maximum amount of ink (ink limit). This will help your costs on inks and improve your drying performance.
- Please follow the recommendations of the printer and ink manufacturer. The temperature for preheating and drying the media should be checked previously to make sure you achieve desired results.

- Pasting application: After wetting the paper should be kept in a plastic box in order to wet the paper sufficiently. We recommend keeping the TriSolv Paper wet for at least eight hours. Longer periods of time don't have any negative impact on the paper. The user is responsible for appropriate microbiological precautions.
- In the event that the paper is exposed to severe climatic conditions, or if it needs to be used for a longer period of time, lamination is recommended. It is advisable to protect the edges and corners if the billboard hoarding is regularly cleaned.
- To maintain the high quality of the paper, it should be stored and converted in a climate of 30 – 65 % relative humidity and temperatures of 10 – 30°C (50 – 86 °F).
- Latex / IR hardening ink is not fully water-resistant.
